PROFILE SUMMARY

Results-oriented Full Stack Software Engineer with over **5 years of professional experience** designing, building, and deploying enterprise-scale, microservices-based applications. Highly proficient in Java, Spring Boot, JPA, REST APIs, React, Redux, Docker, and SQL, with proven experience in regulated and high-volume domains. Track record of modernizing legacy architectures, integrating event-driven messaging systems (IBM MQ, Kafka), and automating CI/CD pipelines on AWS.

SKILLS

- **Concepts:** Object-oriented principles, SOLID principles, Clean Code architecture, RESTful API, Microservices, Test Driven Development, Cloud Native Applications
- **Frontend:** React.js, Redux, JavaScript, Typescript, Next.js, HTML5, CSS3/SCSS, Bootstrap, Ant Design, Tailwind CSS, Jest, React Testing Library
- **Backend:** Java, Spring Boot, JPA, Hibernate, RESTful APIs, Microservices, IBM MQ, Apache Kafka, GraphQL
- **Databases:** PostgreSQL, MySQL, Oracle, PL/SQL, Redis
- **Cloud & DevOps:** Docker, AWS (ECS/Fargate, S3, RDS, EC2, VPC, IAM, CloudWatch), Terraform, CI/CD (GitHub Actions, Jenkins), Git, DataDog, VeraCode

PROFESSIONAL EXPERIENCE

Software Engineer

Cut+Dry Inc, Palo Alto, CA (Remote)

Jan 2026 – Present (08 months)

- Re-architecting core application workflows and microservices to optimize application structure and minimize tech debt.
- Refactoring backend API contracts using Spring Boot and JPA to ensure high performance and maintainability.

Associate Technical Lead

Sysco LABS Technologies, Colombo, Sri Lanka

Aug 2024 – Dec 2025 (01 year 04 months)

- Designed and developed end-to-end labor management features for warehouse operations using React, Redux, TypeScript, Spring Boot microservices, and JPA.
- Architected event-driven microservice integrations utilizing IBM MQ to process high-throughput message streams and sync operational data reliably.
- Implemented and optimized CI/CD pipelines with Jenkins, Docker, GitHub Actions, Terraform, and AWS, cutting deployment errors by 90% and release cycles by 50%.
- Mentored 3–4 engineers on clean API integration patterns, RBAC enforcement, and enterprise React practices..

Senior Software Engineer

Sysco LABS Technologies, Colombo, Sri Lanka

Aug 2022 – Aug 2024 (02 years)

- Developed microservices and RESTful APIs using Spring Boot and JPA integrated with React and Redux, powering operations for 1,000+ warehouse operators.
- Integrated IBM MQ asynchronous messaging patterns to handle background task processing and enterprise integration workflows.
- Optimized complex SQL queries and database schemas in PostgreSQL/Oracle, cutting heavy task execution times from minutes to under 30 seconds.
- Built shared React component libraries and standardized microservice communication schemas, reducing frontend development timelines by 80%.

- Resolved critical production defects and built dynamic tray selection and report generation modules, ensuring high reliability and smoother warehouse operations.

Software Engineer

Sysco LABS Technologies, Colombo, Sri Lanka

Jul 2021 – Aug 2022 (01 year)

- Engineered responsive React frontend interfaces and connected them to secure Spring Boot REST APIs during legacy system migrations.
- Improved system reliability and performance through optimized state management, error handling, and SQL query tuning.
- Collaborated with QA engineers and product managers to refine acceptance criteria and improve release quality, reducing rework and failed test cases by 15%.

Trainee Associate Software Engineer

Zone 24x7 Inc, Colombo, Sri Lanka

Jul 2019 – Mar 2020 (07 months)

- Built an internal code-quality dashboard using Spring Boot, Kotlin, Angular, and PostgreSQL, enabling real-time insights into code health and reducing unresolved code smells by 50% within three months.
- Developed full-stack modules for a Warehouse Management System (React + Nest.js), contributing to a platform that improved warehouse efficiency by 90% through streamlined operations and intuitive UI workflows.

PROJECTS

- **SWMS Modernization** - The Modernized Legacy Warehouse Management System (WMS) for Sysco is a critical application used across over 200 large-scale warehouses worldwide. It serves thousands of users who manage inventories, orders, returns, and generate essential reports for operational efficiency. The modernization project focuses on migrating from a legacy Oracle Forms-based system to a more scalable, responsive solution built on Java and React. This effort aims to enhance user experience, improve system performance, and enable easier future maintenance. The project has been ongoing for the past four years and continues to evolve as part of Sysco's digital transformation strategy.

Key Technologies: Java 17/21, Spring Boot, React 16/19, Redux Toolkit, Typescript, REST APIs, Microservices, IBM MQ, Oracle, AWS ECS, Docker, Jenkins, GitHub Actions.

-
- **SWMS Core UI** - SWMS Core UI is a React component library that serves as a wrapper around Ant Design (AntD), customized with Sysco's design theme. It provides a consistent UI/UX across the warehouse management system by standardizing components. In addition to theming, it extends AntD functionality with custom components such as an editable data table and an advanced search module. These enhancements streamline development and ensure feature-rich, reusable UI elements. The library plays a key role in accelerating frontend development across multiple SWMS modules.

EDUCATION

Bachelor of Science Honours (B.Sc.)(Hons) in Software Engineering

University of Kelaniya, Sri Lanka (RMI Verified)

Mar 2017 – Apr 2021

- Graduated with **First Class Honours** (3.74/4.00 CGPA), maintaining academic excellence throughout the program.
- Conducted a final-year research project on **Experience-Based Developer Recommendation System**, leveraging **Machine Learning** techniques to analyze developer's previous contributions and suggest optimal team compositions.

VOLUNTEERING

- **Institute of Electrical and Electronics Engineers (IEEE)** - Co-led the Design Team for IEEE SLSYW Congress 2019 and contributed as a Design Team Member for IEEE Techno Meetup 2018, supporting event branding, social media and website design, and coordination.
